STRONGARM

MX-V MAGNETIC DRILL PRESS

- **NO POWER NECESSARY**
- **SUPERIOR PERFORMANCE**
- **SMALLER FOOTPRINT**

Cordless Magnetic Drill Press MX-V with switchable magnet technology (MAGRIG), provides superior holding power, weighs less and with a smaller footprint compared to other magnetic drill presses.

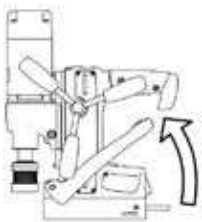

Weighing in at only 7 kgs and a foot print of only 190mm x 80mm the MX-V provides **680kg HOLDING POWER** and is effective on thin and thick metal surfaces. The real surprise is it requires **NO ELECTRICITY.**

Just flip the switch to stick the rig! The rig comes standard with drill collar for popular 1/2" drills including Metabo, Bosch, Milwaukee and DeWalt corded drills. Additional collar available for the DeWalt 20V Cordless drill.

Place the MAGRIG to the safe & lock the MAGRIG in place.

Turn on the drill & slowly rotate the handles to drill into the safe.

WATCH THE VIDEO DEMO TO SEE HOW IT WORKS AT sglocks.com.au

When drilling is complete, simply release the lock & remove the MAGRIG

DOOR CLOSERS EXPLAINED

The purpose of this month's tech tip is to shed some light on selecting Door Closers & explain the terminology/differences to ensure you have all the facts to make the right choice.

Things to consider when choosing the right door closer

1. Door frames

How is your door mounted on the frame and how much space do you have? Ensure that the door closer you choose has different arm configurations & brackets when some customisation may be required.

2. Where the door is located & how it is used

Doors with more frequent traffic need a more heavy-duty door closer & doors located at a main exit / designated fire exit need to have fire rated door closers to comply with building codes or regulations.

3. Consider the user

Example; if the door closer was to go on a door in an elderly home you will need a door closer with easy opening, speed, latching & delay adjustment to cater for the elderly as they may not be able to move through the door as quickly as others.

4. Weight and width

The larger/heavier the door the more force required. Most door closers have adjustable strengths to cater for the weight and size of different types of doors.

5. Requirements and Regulations

Some Premises & Doors have rules and regulations that you may have to follow e.g. fire rated doors require a fire rated door closer in order to meet regulations or building codes.

6. Environment

Believe it or not the environment can affect how a door closer operates. The most overlooked factor is considering how a room reacts to rises and drops in air pressure. Example; A fire stair well door must close against a pressure differential between the airconditioned floor area and non-airconditioned stairwell.

DOOR CLOSER FUNCTIONS/TERMINOLOGY

- 1. Power adjustment** - Adjustable closing torque for heavier/lighter doors
- 2. Adjustable Closing speed** - The Adjustable Closing speed from 120° opening through to the final 15°
- 2. Latching action** - The adjustable speed of closing in the last 15° to overcome seals and latches. Please Note: Using this function may contravene the Building Regulations. The door should latch from any angle. To test this, the door should be opened very slightly and released. In the event of failure to latch the reason should be identified and corrected.
- 3. Delayed action** - The adjustment to delay the closing cycle to give people extra time to pass through the doorway. Adjustable between 70° and 120°.
- 4. Backcheck** - This feature prevents the door being suddenly thrown open either by people or the wind - this can prevent damage to the door, the frame, door hardware and property. Backcheck can also be used as a secondary precaution by limiting the door opening to help prevent damage.

RACK & PINION VS CAM ACTION

Rack and pinion door closers have been used for more than 50 years and are a reliable & cheaper choice. The closing functionality is achieved with the use of a spring. The spring is compressed as the door opens and expands as it closes pushing the door into a closed position.

Cam action door closers are the only Mechanical door closer type that are approved to the Australian Standard AS 1428 'Access to Premises' and meet the current building codes. Their Linear design achieves a lighter opening allowing easier access for small children and the elderly. Cam Action Door closers are mandatory on all disabled access exit doors.

Check out the LOCKTON Door closer comparison chart on page 10 to help identify the right closer to suit your requirements.
