Mobile KD - Transponder Archiving

The purpose of this month's tech tip is to explain the purpose & usefulness of Archiving Transponder data on the mobile KD app.

Archiving has been around on certain cloning machines for a long time. Although, the feature was generally cumbersome to use and in turn was not utilised by the majority of Users.

Mobile KD has overcome this issue by :

1. Automatically saving the data when you clone straight into the archive.
2. Making it easy to enter more vehicle information & search for the data.
3. Cloud based data storage. The benefit of KD's Cloud system is that these files can always be retrieved in the event of hardware loss or malfunction. Logging into the application on a different device will automatically download your transponder archive.

Transponder Archiving also has the potential to be a chargeable service offered to a client (especially fleet services). Transponder data and key code data could be stored against an Owner/Company name & Rego. in the event of a lost key another key could be created without attending the vehicle & be picked up or posted to the customer.

To use this new feature you will need both a KDX2 & the most current version of the Mobile KD application on your device (phone -tablet etc.) You will also have to be logged into the application with a verified account.

STEPS:

1. Go to Chip function under the heading Chip Clone in the mobile KD application.
2. Select Automatic Detection Clone.
3. Follow the steps to clone the key.
4. Exit this screen once complete & Select My Cloud Chip under the Chip Generation Heading.
5. You will now see 4 options , ID46-ID4D-ID4C & ID48. The cloned Transponder data will automatically save under it's transponder type.
6. After selecting the appropriate type you will now see a list of recently cloned transponders. This list auto poulates by most recent at the Top oldest at the bottom.
7. You can now select one of these files and have the ability to name it & Add notes. You can come back into this file anytime and generate a transponder from here , edit information or delete the file if necessary.
8. KD have included a Search function that searches on all of the fields. We recommend entering Vin number, car type, rego etc. so that this search feature can be correctly utilised. ensuring you can find the Transponder data easily as your list gets longer.

Note: ID48 is Free to retrieve for 7 days after 1st originally cloned. After 7 days the cost to retrieve the data is 100 K-coins.
